

Multi-level token

Structural multi-level token with financial capital protection

- ROI - up to 310'000%
- MLM – based coupon revenue
- Protection of capital - 55%
- Any moment buy-back, high liquidity of tokens
- Duration of the project - 5 years
- Daily payoff of coupon income

Disclaimer of legal responsibility

The purpose of this technical document is to provide potential holders with information about Multi-level token (MLT), its structure, basic asset, source and distribution of the coupon revenue in respect of proposed Initial Coin Offering (ICO). The information here-below is not complete and does not imply any kind of agreed relations. The sole purpose of this document is to give relevant and sufficient information to the potential holders of tokens so that they could thoroughly analyze the investment proposal should they intend to buy MLT tokens.

This technical document is not an official proposal to buy or sell securities in any of jurisdiction where it is illegal to make such proposals. Neither the Swiss Financial Markets Authority nor The United States Securities and Exchange Commission, SEC, nor any foreign regulative authority has approved of investments into these tokens.

Some articles, assessments and financial data in this document are forecasted statements or information. Such forecasted statements or information are related to known and unknown risks and uncertainties that can lead to the fact that actual events or results shall significantly differ from assessments or conclusions implied or expressed in such forecasted statements.

This technical document in its English version is a main source of information about MLT token. The information contained in this document may at times be translated into other languages or be exploited when performing written or oral communication with active and potential members of the association, with partners etc. When performing translations or during such communications some information contained in this document can be lost or distorted. The accuracy of such alternative communications is not guaranteed. If any sort of conflict or discrepancy arises between such translations and communications, on one hand, and this official text in the English language, on the other hand, the priority power shall be given to the articles of this basic document in English.

Concise Review

Multi-level token (MLT) – is a derivative structural product, based on Ethereum blockchain and has a basic asset of cryptocurrency Ether (ETH). MLT tokens provide their holders with a right to acquire income out of ETH value increase and a coupon revenue, that is formed by the bonus program designed into the token's algorithm and is based on the principles of multi-level marketing. The amount of a coupon revenue depends on volume of initial investments and on a position of a member's wallet within a rigidly structured network.

Such a network is formed according to a "tree" principle. Every new wallet of a member takes its place in accordance with the algorithm of a tree formation – i.e the upper unoccupied tree cell. One level down three other wallets are placed of those members who bought them later, and beneath every one of those three wallets another three wallets are placed, and so forth. The algorithm provides for uniform and fair allocation of all wallets on every tree branches.

A part of capital (55%) acquired from sold tokens is invested into a cryptocurrency Ether (ETH), that automatically secures and hedges the capital. The other part is transmitted onto the bonus program of ICO members whose wallets are placed 10 levels higher on a tree. The third part is a commission at which expenses, network support costs and token offering spendings are covered. The fourth part of capital is spent on a Motivation distribution program for the ICO materials and information (Bounty pool).

This project provides for five investment programs according to which every branch of the network shall be filled-in:

- ▶ TIER1 - 0.05 ETH;
- ▶ TIER2 - 0.1 ETH;
- ▶ TIER3 - 0.2 ETH.
- ▶ TIER4 - 0.5 ETH.
- ▶ TIER5 - 1 ETH.

On each branch with every new level the number of members grows exponentially:

- ▶ 1 lvl - 3;
- ▶ 2 lvl - 9;
- ▶ 3 lvl - 27;
- ▶ 4 lvl - 81;
- ▶ 5 lvl - 243;
- ▶ 6 lvl - 729;
- ▶ 7 lvl - 2 187;
- ▶ 8 lvl - 6 561;
- ▶ 9 lvl - 19 683;
- ▶ 10 lvl - 59 049;
- ▶ and so forth.

The bonus pool of every new investment is divided equally between 10 wallets that are placed higher on the tree. In case a branch, which is placed ten levels lower from a certain member's wallet is filled-in completely, this specific member's wallet receives 10% dividends from the bonus pool of each investment of total 88'572 members which is 3,5% of their common investment. Each new member of a certain branch starts receiving profit immediately after filling in at least one cell down.

The formation of the bonus pool for the members who made investments earlier is made by the new members investment, who bought tokens later. Other sources of the bonus pool formation are not provided for. Along with that, the most part of the capital is invested into the ETH that secures and hedges the investment capital especially in case of constantly ETH value growth. From a point of view of the project founders the network model is fair and conforms with a market functional mechanism practically of any asset:

- (1) quotations grow because of buying by new investors;
- (2) members who bought an asset in the beginning of an up growing trend receive surplus profit;

This is a common practice for all stock markets in all times throughout the entire history of their existence.

Information about ICO

▶ **MLT Token** – it is an Ethereum token of ERC-20 standard;

▶ **Structure of a token:**

- 55% - Ether (ETH);
- 35% - Coupon pool;

- 5% - Commission for the offering;
- 5% - Motivation program for the ICO materials and information distribution (Bounty pool).

- Ether (ETH)
- Commission for the offering
- Coupon pool
- Bounty pool

▶ Investment programs:

- TIER1 - 0.05 ETH;
- TIER2 - 0.1 ETH;
- TIER3 - 0.2 ETH.
- TIER4 - 0.5 ETH.
- TIER5 - 1 ETH.

Every tree branch only allows the placement of only one type of tree cell, TIER - 1, 2, 3, 4 or 5. Members who chose one of the programs receive bonuses from participating investors of the same program only.

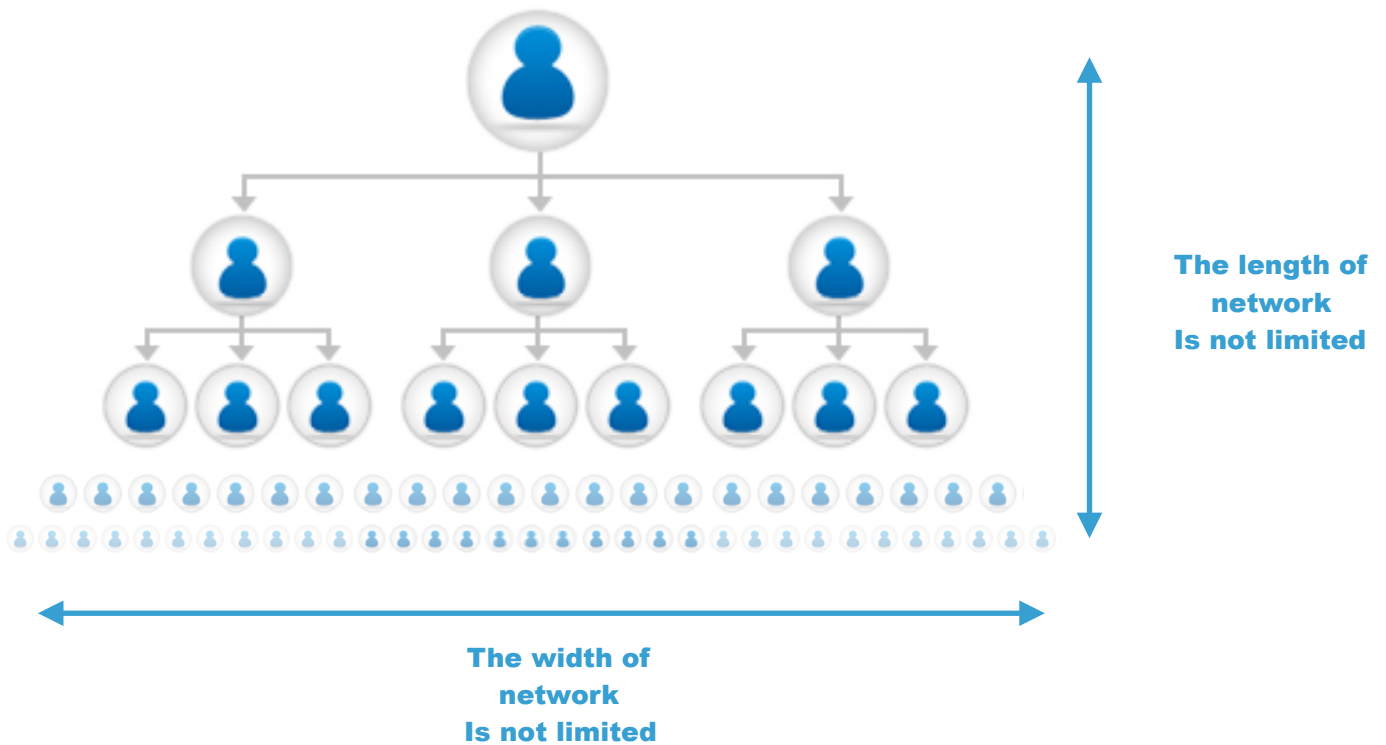

▶ Main asset and Capital security:

The capital of MLT token is protected by direct investments of 55% into one of the leading and prospective cryptocurrency assets - Ether (ETH).

► **Network Structure:**

Beneath every wallet on tree the wallets of three other members, who bought tokens later, are located accordingly. Under them correspondingly are placed another three wallets and so on and so forth from the very top till the bottom of the whole network structure.

► **Duration of the project, offering period, buy-back and redemption:**

- Duration of the project (offering period until the moment a token is redeemed) is 5 years. Tokens are offered within the period of 23/02/2018 till 23/02/2023.
- Token is offered and is available for buying throughout the whole period of its validity right up to it is paid off. The placement of tokens does not imply preliminary offering (pre-ICO). Members who bought MLT earlier have chances to earn more income through the higher allocation of their wallets on a tree;
- Buyback, which is under the full control of Ethereum blockchain based smart contract is possible at any time by the request;
- Redemption of a token is effected after 5 years after its placement.

► **Pay-offs:**

- The value of a coupon depends on the introduction of new members specifically into your branch. The calculation of the coupon and its mechanism is integrated into the MLT token algorithm and is approved by Ethereum blockchain. Each day the 10% of the bonus pool amount of every member, whose wallet is placed in any tree cell 10 levels lower from your wallet on your branch, shall be deposited into

your wallet (which is 3,5% of the investment). When all cells of your branch are filled in, the total number of members can reach as many as 88'572. Ethereum network commission for effecting transactions are withheld out of the coupon value. The coupon is paid off in MLT tokens.

- Advance sale of tokens (buy-back) – you can redeem any amount of tokens at any moment. With this, your wallet secures its place on the tree and you shall continue to receive the coupon in accordance to appearance of new members in your branch. The sell rate is fixed and shall not change till the token circulation period expires. Buy-back is only possible with the wallets participating in the network and only by the amount of tokens obtained either within bonus coupon program or initially purchased at the offering.
- Redemption – when a token is redeemed you receive its value in ETH onto your wallet, which the initial buying of tokens was made from.

The mechanism of the bonus pool distribution, coupon payment, tokens buy-back and redemption is controlled and executed by a smart-contract integrated algorithm and is confirmed by the Ethereum blockchain. Neither ICO providers nor any other part has any affect onto this process.

► **Tokens issue amount:**

- Tokens issue amount is not limited;
- Unalloted tokens shall not be issued.

► **Token value and Membership cost:**

1 MLT price = 0,01 ETH (100 MLT = 1 ETH).

TIER	Amount of Investment, ETH	Initial amount of MLT Tokens	To your wallet, MLT	To Coupon program Fund, MLT	To Bounty Pool, MLT	Commission, MLT
1	0,05	5	2,75	1,75	0,25	0,25
2	0,1	10	5,5	3,5	0,5	0,5
3	0,2	20	11	7	1	1
4	0,5	50	27,5	17,5	2,5	2,5
5	1	100	55	35	5	5

► **Increase in profitability:**

In order to increase profitability a member can take part in the information distribution campaign about the project. Invite three new active members and your chances to fill in your branch shall gradually increase.

Web page: mltoken.io

Redemption date: 23/02/2018

Allowed form of payment: ETH

Offering date: 23/02/2023

Problem

The cryptocurrency market is affected by the laws of economy and inevitably bypasses cycles of development, relational to markets of other assets. These cyclic stages are:

- ▶ accumulation stage, when big market players start buying in assets at lowered prices because large part of market players sell the assets off at this moment in order to cover their costs or minimize losses.
- ▶ growth stage, when big market players have already bought all necessary assets and start gradually pushing prices up.
- ▶ distribution stage, when a balance between buyers and sellers appears, the market reaches its summit, and a short stagnation is observed.
- ▶ decrease stage, when the price is trying to break through its peak few more times due to a small group of buyers, who want to follow the trend running out fast. As soon as last buying are completed the decrease is inevitable.

Providers of ICO believe that the cryptocurrency market at the moment of composing of this document is trending to a decrease stage within the scope of this local economic cycle, and they expect the growth of rates in the beginning of the next economic cycle, that shall be marked by significant events in the industry of cryptocurrencies and blockchain as a whole. Thus the MLT team believes is becomes more and more difficult for the investors to chose between cryptocurrency assets that can yield substantial profit. At the same time the main part of ICOs attract capitals for those projects which recoument depends to some extend on cryptocurrencies market price, effectiveness of management, electricity costs and the attitude of state authorities to cryptocurrencies and a blockchain as a whole.

Structures and instruments based on the principles of multi-level marketing though, characterized by a stable growth of sales and share quotations (Qnet, Amway, Avon products, Mary Kay, Oriflame, Faberlic, Kirby and others), still possess a low speed of development compared to most popular assets on the cryptocurrency market. This is explained by that:

- ▶ the distribution of marketing information, sale of a product or an asset is being performed physically;
- ▶ development of new markets goes gradually, region by region, country by country;
- ▶ to maintain the network functioning constant staff training and coaching are necessary;
- ▶ financial flow is levied by many transactional and tax burdens;
- ▶ pay-offs are controlled by network founders.

Solution

Multi-level token offers investors simultaneous allocation profits into one of the leading and prospective cryptocurrency assets i.e. Ether at the dawn of a new economic cycle (from a point of view of the founders of MLT Project) and participation in a bonus

program based on network marketing principles (MLM).

MLT token offers its members a potential dividend yield comparable to the yield earned by investors who first had believed Bitcoin in the beginning of its development and afterwards sold it at current prices. The calculated ROI under the condition that all meshes of all 10 levels of the network beneath the wallet of a member is 310'000,00%.

Implementation of the project based on a blockchain technology, specifically Ethereum blockchain, makes it possible to avoid typical shortcomings inherent in MLM-systems, thanks to the following features:

- ▶ the capital flow and a bonus pool distribution and token redemption and buy-back mechanisms are controlled by the smart contract algorithm and confirmed by the Ethereum blockchain;
- ▶ the project does not have a geographical location and is of a global character that enables the ability to attract members from all over the world starting from the very first day of the token offering;
- ▶ the network has an instant liquidity, at the time of buying of new tokens the bonus pool is distributed among the wallets of investors in accordance to the algorithm during the transaction verification period by the Ethereum blockchain;
- ▶ the flow of the capital is not imposed by substantial transactional or other tax burdens exceeding the limits of a Ethereum blockchain commission.
- ▶ in order to maintain the mechanism of network marketing functional real-life meetings of the members or trainings etc. are not required.

The token algorithm provides for a security of the most capital because a part of the capital is invested into cryptocurrency ETH, the potential price growth of which can compensate any kind of possible losses.

Example of the Coupon Calculation

In the Table below the calculation of coupon potential payments is given for each 10 levels below the member's wallet in the tree in case the levels are fully filled-in:

Ethereum is a platform for decentralized online services based on blockchain and functioning on a smart-contract basis. It is implemented as a single decentralized virtual mechanism. It was invented by the founder of Bitcoin Magazine Mr. Vitaly Buterine in the end of 2013, the network was launched in July 30, 2015.

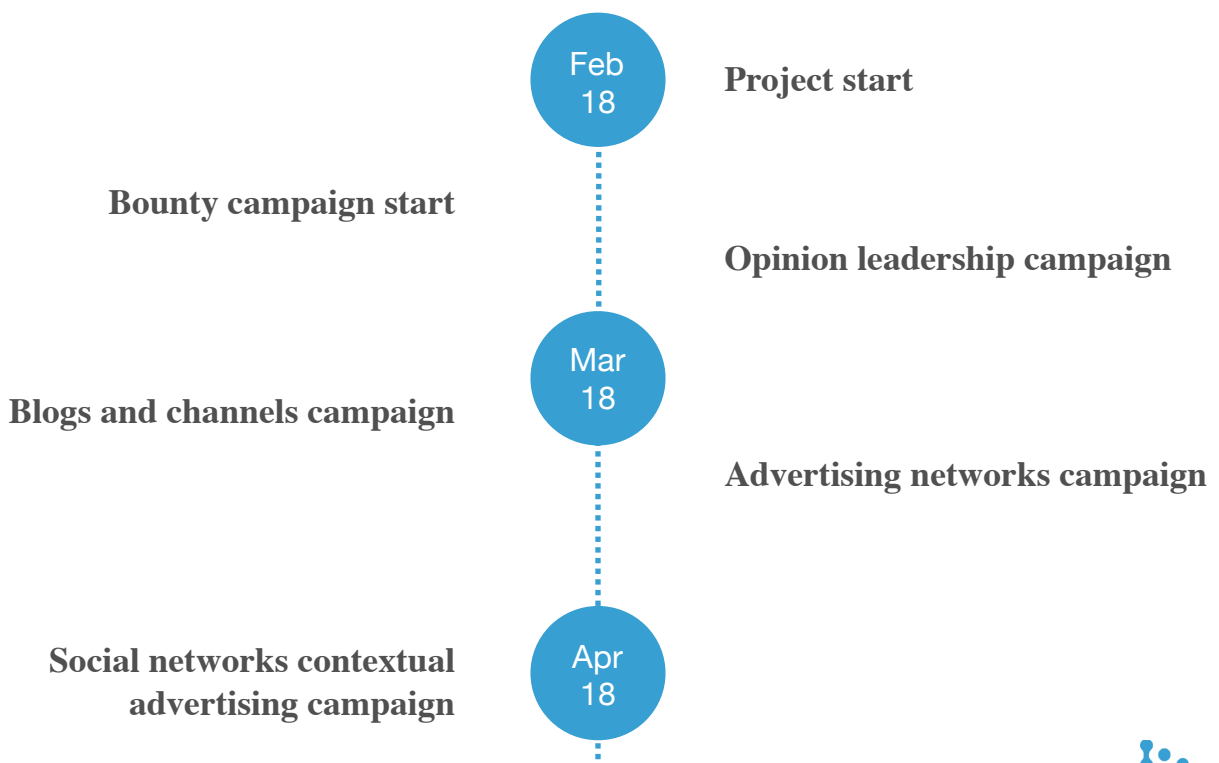

As an open source platform Ethereum makes it considerably easier to implement blockchain technology which explains the interest in it not only from start-up companies but also from the biggest software developers such as Microsoft, IBM, Acronis. Significant interest in this platform is expressed by financial companies, including banks, also Lufthansa airline.

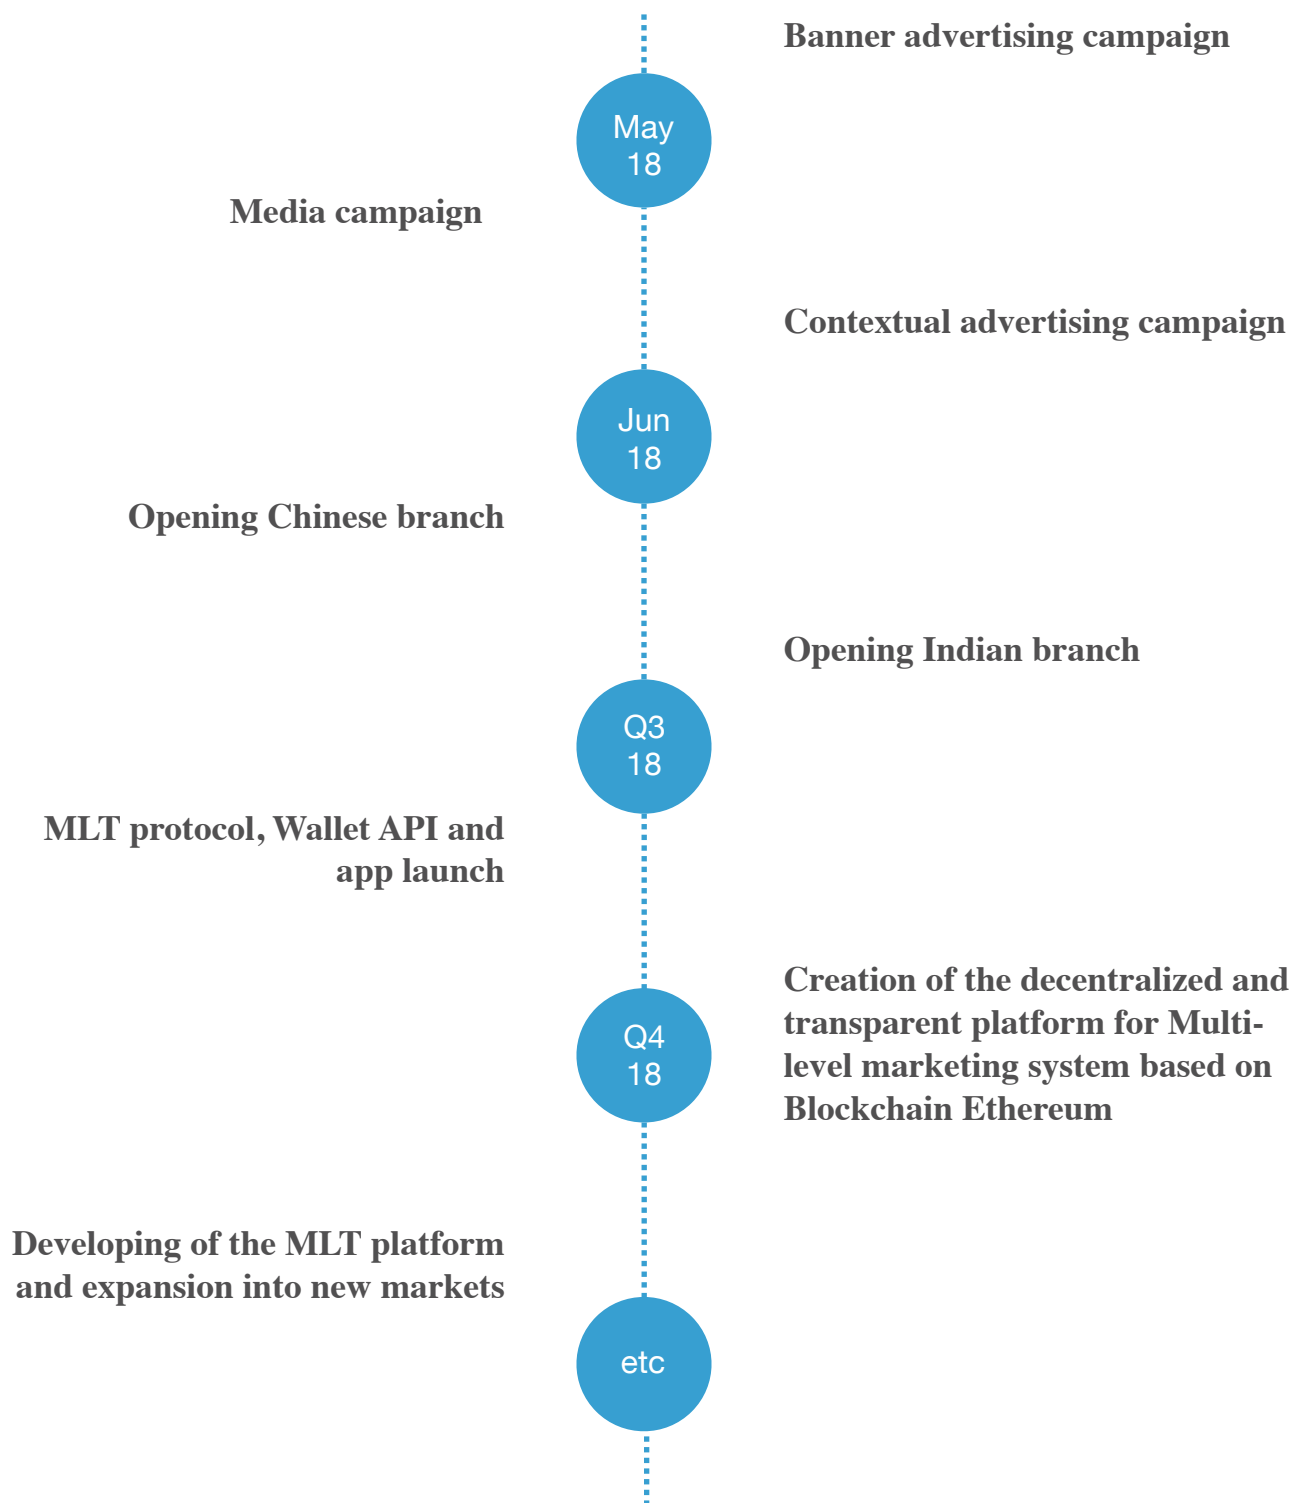

The exchange units of Ethereum are called Ethers. In contrast to other cryptocurrencies its founders do not limit the use of the ether as payment units but also offer it, for example, as means to exchange resources or to register deals with assets through smart-contracts. In particular, the founders call the ether "cryptofuel" for smart-contracts of a single-rank network. The ether is on sale in exchange services, the total capitalization of the ether amount exceeds 100 billion US dollars.

Level of Referral branch below member's wallet	Number of cells on the level	Potential coupon value when all cells are filled in on the level, MLT				
		TIER1	TIER2	TIER3	TIER4	TIER5
1 lvl	3,00	0,53	1,05	2,10	5,25	10,50
2 lvl	9,00	2,10	4,20	8,40	21,00	42,00
3 lvl	27,00	6,83	13,65	27,30	68,25	136,50
4 lvl	81,00	21,00	42,00	84,00	210,00	420,00
5 lvl	243,00	63,53	127,05	254,10	635,25	1 270,50
6 lvl	729,00	191,10	382,20	764,40	1 911,00	3 822,00
7 lvl	2 187,00	573,83	1 147,65	2 295,30	5 738,25	11 476,50
8 lvl	6 561,00	1 722,00	3 444,00	6 888,00	17 220,00	34 440,00
9 lvl	19 683,00	5 166,53	10 333,05	20 666,10	51 665,25	103 330,50
10 lvl	59 049,00	15 500,10	31 000,20	62 000,40	155 001,00	310 002,00

For example, you chose TIER 3 program, and your entire branch was fully filled in with investment from new members after you made your payment. In that case your wallet will receive 62'000 MLT in total. If your branch is filled up to the level 8, for example, (including all cells) then you will receive 6'888 MLT onto your wallet throughout the period of your membership.

Timeline

Bounty Campaign

The Reward Fund for participants in the MLT Token distribution campaign to attract new members to the network is 5% of all funds raised in the ICO.

Each campaign participant receives 5% of the ETH from the amount of contributions of all the contributors involved, as well as revenue according to the terms and conditions of the token smart contract algorithm and the location of the participant's cell or cells in the project «tree» in case of purchasing tokens by itself.

All fees are paid periodically. At the time of each payout, the entire fund accumulated by the campaign participant is distributed. The remuneration is paid monthly, on the last day of the month. The mechanism of attraction is implemented on the principle of referral link to the project site (mltoken.io). All contributions received from participants who entered the site on the referral link are credited to the participant of the campaign - the owner of the referral link. There is an algorithm integrated into the program code of the project page that allows you to track the traffic received through the referral link, even if the visitor makes a lot of it through the site or accesses it repeatedly after some time.

We welcome all those who will contribute to the development of the project by joining our program.

Mandatory terms of participation

- ▶ Register as a participant of the campaign by [link](#) and get a referral link;
- ▶ Specify your profiles in social networks. Do not forget to open profiles in the privacy settings;
- ▶ Subscribe to the official MLT accounts on the social networks listed on the project website;
- ▶ Like and share photos, videos and project news in any social network, any forum, website, channel in Telegram or other messenger, posting your referral link, and if possible, pointing hashtags #mltoken #mlt #mltico #multileveltoken, not less than 2 times a week.
- ▶ Attract new members online and offline, using your referral link.

Optional participation conditions

- ▶ Take part in MLToken ICO by selecting and investing in one or several TIERS to increase the profitability of your participation in the Bounty campaign.
- ▶ If you have a profile on [bitcointalk.org](#) you can place an MLT avatar and a referral link on it, and attract participants, leaving messages on the forum on various topics. These messages will be counted as fulfillment of the obligatory condition for the “like” and for project materials reposting 2 times a week.
- ▶ If you are a blogger or editor of publications in the field of blockchain and cryptocurrency, we offer you a good opportunity to join this campaign as well. All you have to do is to publish an article or make a video about our project in your blog by placing your referral link in it.

The current status of the campaign can be tracked by the [link](#). Track your position in the ranking of campaign participants by the [link](#).

TOP-50 participants will receive an additional fee of 5% of the amount of contributions of all the participants involved.

Community management Campaign

Help us communicate and explain to others how MLT works.

Terms of participation:

- ▶ Register as a member of the program by the [link](#);
- ▶ Complete the remote interview;
- ▶ Get access to the project CRM and respond to inquiries from potential contributors.

Spam, fraud or abuse, are not allowed, and such participants will be excluded from the campaign. The current status of the bonus campaign can be tracked by the [link](#).

The maximum number of participants is 20 people!

All campaign participants will receive 1% of the amount of all contributions received after consultation with them.

Translation Campaign

Support the project and earn MLT by translating project documents into your language.

Previous translation experience of fintech and blockchain is desirable. We shall consider your application and in case your previous experience is professional enough we shall contact you for the details.

Terms of participation:

- ▶ members have to reserve a language of translation and receive an approval before the localization;
- ▶ book your membership;
- ▶ boon-line translation services are forbidden;

Join the campaign with a [link](#). You can follow the current status of the bonus campaign down this [link](#).

We need translations to Spanish, French, German, Turkish, Dutch, Italian, Portuguese, Korean, Japanese, Indonesian, Filipino, Urdu, Hindi, Thai, Vietnamese.

Legal information for Members

We are sure of that the whole global society deserves its profit share. We believe that investments into cryptocurrencies and MLM-network are open for everyone ready to support this net and gain profits out of it. Based on these principles we founded MLT token. It provides investors with the right to receive full pay-offs in accordance to the algorithm, integrated into the token. In effect MLT can be considered securities or financial pyramid in some jurisdictions. Taking part in the offering the investor shall comprehend possible consequences. Neither the Swiss Financial Markets Authority nor The United States Securities and Exchange Commission, SEC, nor any other foreign regulatory authority has given its approval to investments into these tokens.

MLT – are tokens based on ERC-20 protocol and issued on Ethereum blockchain. This means that any malfunction or damage of the Ethereum protocol can lead to that the algorithm of MLT token may perform not as it supposed to. Blockchain technologies are subject to monitor and control by state authorities all over the world. MLT may fall under one or a number of restrictions or sanctions by the authorities. We are resolute in reaching

the goals stated in this document, but all persons and sides participating in buying of MLT shall do this at their own risk and expense. We wish you luck! Play and win!

Glossary

ETH – Ethereum

ICO – offering of tokens

LVL – a level of a referral tree (in the context of the document)

MLT - Multi-level token

MLM - Multi-level marketing

ROI - Return on Investment

TIER – name of the investment program 1, 2, 3, 4, 5. Description is done in the context of the document.

Asset – a specific form of property, designed to yield revenues (for example: a part of company assets in a form of financial resources: cash and securities, skills and ability to earn).

Algorithm – code for a smart-contract on the Ethereum blockchain, describing principles and rules of the implementation of this project.

Blockchain - a continuous and sequential chain of blocks (a list of connections) designed by specific rules and containing information. Most often copies of block chains are stored independently of one another (extremely parallel) and are processed by a multitude of different computers. In this very document the Ethereum blockchain is being considered.

Investment horizon – in a context of the document it is meant to be a term of circulation of MLT token.

Coupon – a pay-off due to a member of the network in accordance with the rules integrated into the algorithm of a token and conditions of the project. The description is given in the context of the document.

Liquidity – an economic term meaning the capability of assets to be sold promptly at a price close to the market. Liquid — convertible into cash.

Token – a value unit, issued by a private entity within a blockchain system. In the present document it is meant to be the Multi-level token.

Tree – the network of the Multi-level token project, consisting of meshes, every one of which is secured to one of the members (an Ethereum wallet that was used for buying a token). The network building principle is designed into the token's algorithm, it initially divides the net into five branches in accord with five investment programs. Beneath every mesh in every branch there are three more meshes positioned, below them there are three more meshes and so forth. This is how the following branches of a referral tree are formed. The description is given in the context of this document.
